

BHUIYASH KUMAR

Full Stack Software Engineer | .NET / Angular / React

+91 7880623036 | bhuiyashkr@gmail.com | linkedin.com/in/bhuiyash-kumar | Lucknow, India

PROFILE SUMMARY

Software Engineer with 3 years of experience across the full software development lifecycle — requirements analysis, technical design, coding, testing, documentation, and production deployment — building full-stack solutions for US healthcare platforms. Took full ownership of the mCare Online Angular frontend and its backend mCare WebAPI (.NET Framework), including CRUD operations, IIS-based production deployment, and end-to-end frontend-backend integration. Separately built the mCare Claims API, implementing OAuth-based token validation against JWT tokens issued through the Apigee API gateway. Also contributed to a .NET Framework-based Template Builder application. Recognized as Performer of the Month, with client appreciation for delivery quality, and experience mentoring junior team members. Comfortable working independently within cross-functional teams, applying object-oriented design principles, and maintaining code quality through CI/CD pipelines and static analysis tooling.

KEY ACHIEVEMENTS

- Recognized as Performer of the Month for consistent contribution and delivery quality.
- Received client appreciation for the successful delivery and integration of the mCare Online and mCare WebAPI projects.
- Strengthened API security by implementing OAuth-based token validation for the mCare Claims API.
- Mentored junior team members, providing guidance on .NET and Angular development practices.

PROFESSIONAL EXPERIENCE

Associate Software Engineer — Infinite Computer Solutions

Jan 2024 – Present

mCare Claims API – US Healthcare (Nov 2025 – Present)

- Built the mCare Claims API to generate claims data based on JWT tokens issued through the Apigee API gateway.
- Implemented OAuth-based token validation at the Claims API target endpoint, verifying tokens forwarded by Apigee before processing claims requests.
- Strengthened API security by validating OAuth tokens prior to claims generation, reducing exposure to unauthorized access.

Template Builder, Phase 1 – US Healthcare (Sep 2025 – Dec 2025)

- Contributed to a .NET Framework-based Template Builder application, applying object-oriented design principles to support dynamic template conversion and management.
- Designed and implemented CRUD operations end-to-end, from database interaction through to the application layer, for efficient template management.
- Built format-conversion logic to improve template flexibility and reuse, working independently within the existing .NET codebase.

mCare Online (Angular) – US Healthcare (Feb 2024 – Present)

- Led end-to-end delivery of the Tasks and Members modules, building complete UI panels and functionality against evolving client requirements in a production healthcare application.
- Implemented secure authentication using the MSAL library, controlling access and managing user sessions across the application.
- Designed the data flow architecture for core screens, prioritizing scalability and long-term maintainability as the application grew.
- Built a CI/CD pipeline on Azure DevOps with SonarQube integration to enforce code quality standards, troubleshoot issues, and support ongoing performance improvements.

mCare WebAPI – US Healthcare (Jan 2024 – Present)

- Built the mCare WebAPI, a .NET Framework-based backend service, implementing CRUD operations to support core application data used by the mCare Online application.
- Built the Admin Controller and Process Controller components to support core application workflows.
- Deployed and configured the WebAPI on IIS (Internet Information Services), managing production hosting for the .NET backend.
- Integrated the WebAPI end-to-end with the mCareOnline Angular frontend, taking full ownership of the integration from backend through to production.

EDUCATION

Bachelor of Technology — Dr. APJ Abdul Kalam Technical University

Sep 2019 – Jun 2023

SKILLS

Programming Languages: TypeScript, JavaScript

Frameworks & Libraries: .NET Framework, Angular, React, HTML, CSS

Auth/Security: OAuth, MSAL (Microsoft Authentication Library), Apigee (API Gateway/JWT tokens)

Databases: SQL Server Management Studio, MySQL

Cloud & DevOps: Azure DevOps, CI/CD Pipelines, SonarQube, IIS (Internet Information Services)

Other Tools: Visual Studio, VS Code

RESPONSIBILITY

- Responsible for leading end-to-end delivery of the mCare Online project, ensuring timely delivery and alignment with client expectations.
- Responsible for the full integration ownership between the mCare WebAPI backend and the mCareOnline Angular frontend, from CRUD implementation through to production.
